Key Features of Sony Catalyst Production Suite 2019.1. What's New? Addition of new features to the latest update.. New features include: Support for YouTube Improved Presets. Support for new video formats: HDV, 2K and 4K With this update you get a new user interface for your video toolbox. Changes for the display have been made and it's now easier to work with. The changes weren't that big and they were added to make the tool easier to understand. New color names, which are in line with other applications. The new Blacklist window makes it easier to select elements for your storyboard. There are all new special tools in this version, namely, Burn, Join, Split, Separate. There's a new structure, which makes it possible to add special effects to your file. This is possible by using special layers that you can apply to various video formats. Using the logo tool, you can quickly remove the logo from the beginning of the movie, and if you want, you can even burn it out. It's also possible to desaturate the logo, just like all other objects, or remove a logo entirely. It's possible to hide the logo as well. This version is more stable.. The transfer of your old projects works more smoothly. There are a lot of improvements in the entire program. A lot of bugs that you didn't notice before have been fixed. The automatic scrubbing feature has been improved, as well as the multiple editing tools. The quality of the image has improved, compared to the previous version. The audio editing tool has been expanded a lot. The program is easier to use and more intuitive. Audio files can be automatically prepared.. You can edit video files, and
