As an AD student I found the Control panel to be useful in controlling shortcuts within Photoshop and its plugins. I was also able to launch tools from the Control panel that are inaccessible or hard to find from the toolbars and menus. Having more organizational options was also a big bonus, as some plugins I use that are local to Photoshop. The biggest drawback was that it only works on Windows. I do like having the switcher and menus at the top, but many of us have switched to Mac since there is a lack of organization on Mac OS. And I found that actions could be more easily mapped to keyboard shortcuts if they would just assign custom keystrokes directly from a keyboard. Adobe Photoshop programs can do a lot of things versus photo editing software. However these days, a lot of people who only want to edit photos don't need all the other features that Photoshop offers. With the recent version of Photoshop, the organization was changed. The main thing to remember is that the Save button is located at the bottom right of the bottom toolbar instead of at the top. The duplicates tab was stripped down — it contained only one button now. Just last week I found that one important button that was removed from the Organize dialog is now in the Save options. Like many other things, you can manually add more items to the rows and columns to get rid of duplicates and to have the view in a grid of sorts. Also, there are two new buttons allowing you to organize image files into two different categories. In addition to the bottom-right panel for Save options, a new panel has been made for running a batch process, which is nice. The other new thing is the three-column view, which allows for the best organization of files in Photoshop. However, I find that the default view is more helpful when making selections. It's easy to see what's currently selected versus the rest and you can change this by clicking on Organize. Just like the save options, you can manually add more columns to the top panel.
